23,000 lost-time cases of work related pain are reported yearly in healthcare.

Nursing assistants suffered more musculoskeletal disorders (MSDs) from 2013 to 2015 than any other occupation.

Safe Patient Handling programs have shown success in decreasing incidence of injury for both nurses and patients.

Relying on body mechanics or manual lifting techniques alone is not effective in reducing staff or patient injury.

Patients feel more comfortable and secure when a mechanical device is used.

Patient handling equipment & devices can help prevent patient falls, bruises and skin tears.

Investment in SPH policies and equipment can be recovered in 2 to 5 years.

According to OSHA, research doesn’t lie...

11 states have enacted safe patient handling laws, and more SPH legislation has been introduced at the federal and state levels.
